

What is the code doing?

Alvin Gavel

The code is meant to, for each test type, go through the following:

- What test is this? This is in the column *test_type* in the file *kss_data.csv*, according to the abbreviations:
 - *M*: Arithmetic
 - *W*: Working memory
 - *ST*: Episodic memory
 - *stroop*: Stroop
 - *reactionTime*: Simple reaction time
- Were the participants sleep deprived? This is in column *sd* in the file *kss_data.csv*.
- How well did the participants estimate that they did? This is kept in column *rating3* in the file *kss_data.csv*.
